

# Providing clean air for more than 50 years

## With passion, expertise and reliability

Sagicofim is a recognized leader in the development and manufacture of air filters, air distribution components and integrated air filtration systems for use in critical environments. Our customers include pharmaceutical companies, healthcare facilities, research centres, industrial corporations, universities and OEMs

### Back in the 1960s, the company

began developing high efficiency filters and, in few years, a complete range of products was available, from low up to high efficiencies, HEPA and ULPA.

Since the very beginning, our technical approach has been oriented towards creating a strong and loyal relationship with our customers, by dealing with them with competence, turning their problems to solutions and their strict requirements to reality. Additionally, this way of working closely with our clients gave us a clear and deep understanding of all the risks linked to a faulty design of HVAC plants for critical applications. A proper air filtration, but also the right way of making the air flow to and from high demanding environments is extremely important.

For this reason, in the 1980s, the company entered the market of air diffusion and air distribution, setting up two new manufacturing facilities for the production of a wide range of air diffusers, grilles, dampers, VAV/CAV devices, sound attenuators and all the ancillary equipment to fulfil our customers' needs.

Nowadays, with four manufacturing facilities, internal testing laboratories, one forward thinking R&D centre and the uncountable experience gained in more than half a century, Sagicofim is recognized as a "100% made in Italy" solution provider for critical HVAC plants and a reliable partner for manufacturers of containment systems. We are grateful to all our customers who still trust us after more than 50 years, confirming the result of our commitment to our core values:

### Passion

The customer, and not the product, always inspires us to deliver better solutions for a better environment.

### Expertise

When you study a problem, you will find many different solutions. Only extensive knowledge will make you study a problem in depth and thereby reach the unique and perfect solution.

### Reliability

To us, even the smallest improvement is another step in our ongoing strive for excellence.

# SagiCofim

Ecoefficiency for Indoor Air Quality

Available from M5 up to H13 efficiency class

Wide filtering surface and high energy class

High capacity versions for LCC improvement

Heavy duty versions for turbogas and power plant applications

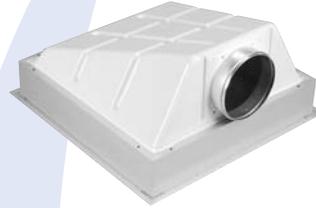

## RP

Wide range of multi purpose compact filter

## DIF-P

HEPA and ULPA lightweight filter housing

Moulded leak free polystyrene plenum

For unidirectional, turbulent or Coanda effect air flow

Easy and quick installation and maintenance procedures

Reverse liquid seal version also available

Low pressure drop models for energy saving and low noise level

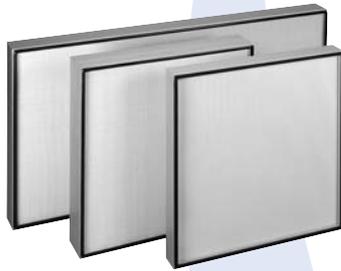

A wide range of sizes in three different thicknesses

Downstream fabric equalizer for unbeatable air velocity uniformity

The ultimate filter for cabinets, isolators, fume hoods and fan filter units manufacturers

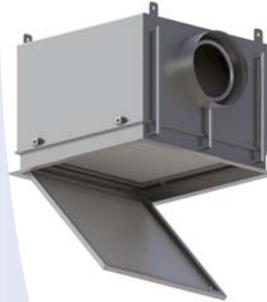

## AB/MAB/DAB PLUS

HEPA and ULPA for unidirectional airflow

## PHARMASAFE

HEPA and ULPA top class filter housing

Continuously welded AISI 304 stainless steel housing

Plug-in connection for challenge aerosol dispersion directly inside the housing and for pressure drop testing

Reverse liquid seal for gel gasket filters

Extremely wide filtering surface

Suitable for high air flow and low pressure drop

Strong and lightweight plastic frame for easy installation

Recommended for in-line housings and B.I.B.O. systems

High temperature versions available

## NB-P

EPA and HEPA filters for high air flow

## CANISTER

B.I.B.O. safe exchange housings

Powder coated steel housing

Modular system

Single or double side access

Suitable for pre-filters, high efficiency and activated carbon filters

 ATEX version available

Room side filters replacement. B.I.B.O. system

Multiple filter sections

Minimization of exhaust air ductwork sanitizing procedures

Stainless steel front panel and exhaust grille

## CANWALL

Wall mounted safe change filter housing

## DEC-A DEC-S

Exhaust grilles with two integrated filtering sections

Specifically designed and manufactured for critical environments

Aluminum or stainless steel versions

Frame flush to the wall for the most accurate cleaning procedures

Both a pre-filter and a final filter can fit into the housing

Perforated front panel
